

Revolutionary Application Security

POWERED BY WARATEK

Revolutionary Application Security protects applications and middleware from both known and unknown vulnerabilities. It uses Java runtime detection and remediation to prevent attacks before they can reach their targets without the need for regression testing or downtime. This advanced security solution offers 100% accurate protection, safeguarding enterprise applications and middleware with miniscule impact on performance and without disrupting business operations.

Zero-day Protection for Applications and Middleware

- Protects against both known and unknown vulnerabilities with real-time detection of patterns that indicate exploitation of weaknesses
- Protects against SQL Injection, cross-site scripting, remote code execution, and Java object deserialisation
- Protects older releases, including those the vendor no longer fully supports; no need to deploy major upgrades to receive security fixes
- Automatic security hardening with full forensic data

Easy to Deploy and Maintain

- Support Revolution helps to quickly and easily implement the solution
- No downtime or extensive regression testing
- No false positives, unlike Web Application Firewalls (WAFs) that use imprecise heuristics
- No perceivable performance impact

Support Revolution Comprehensive Security

Support Revolution offers comprehensive security solutions for Oracle, SAP, and VMware. We enable organisations to maintain a strong security posture without the need for costly upgrades or adhering to vendor roadmaps.

- Enterprise-grade security solutions are available, including Revolutionary Enterprise Security, Revolutionary Application Security, and Revolutionary Database Security
- Our Global Security Team delivers SAP (monthly) and Oracle (quarterly) security advisories on new threats that may affect you; we detail the severity and remediation recommendations
- Hardening guides are available at no additional charge to protect your systems from vulnerabilities
- Revolutionary Managed Security Services delivers enterprise-grade security that you don't have to manage and administer, giving you time to focus on projects that move the needle for your business
- Support Revolution can partner with you to implement security solutions and recommendations
- Analysis and implementation of custom security measures are available as required

- Assistance in maintaining application compatibility with modern security standards is available, ensuring uninterrupted connectivity and functionality with external partners

Support Revolution helps organisations effectively maintain their Oracle, SAP, and VMware software and reallocate budget and resources towards strategic initiatives by providing:

- **Significant cost savings** of up to 90% compared to vendor maintenance costs.
- **Issue resolution** for all technical and functional aspects
- **Interoperability and integration support** ensures optimal functionality across your enterprise ecosystem
- **Fast response SLAs** of less than 10 minutes for critical issues
- **Binding resolution times** of less than 2 hours for critical issues
- **Assigned Primary Support Engineers and Account Managers** for personalised support
