- Complete Hyperion portfolio support back to 9.3.x
- Comprehensive security protection
- Integration and interoperability support
- Support for Hyperion customisations
- Fast response and resolution SLAs
- Assigned Primary Support Engineers and Account Managers

## Software Support Overview

Oracle Hyperion is an enterprise performance management (EPM) suite that improves financial processes like planning, budgeting, forecasting, and reporting, making it an essential system for many organisations. Support Revolution is a trusted partner for businesses seeking responsive, flexible, and budget-friendly support for their Oracle Hyperion software. Support Revolution specialises in providing independent third-party support tailored specifically for Oracle Hyperion systems. Our services are designed to maximise software investments while navigating the complexities of enterprise performance management.

## Hyperion Challenges

Oracle Hyperion customers often face many issues that hinder operations including difficulties with customisations and integration across multiple applications. These challenges can lead to inefficiencies and increased operational costs, as organisations struggle to synchronise data and manage performance issues effectively. Additionally, the recent decline in available expertise within the Oracle Hyperion community, and expensive and slow Oracle support, further complicates Hyperion operations. Migrating from Hyperion on-premise to Oracle Cloud EPM involves complex and costly rearchitecting processes.

## Support Revolution for Oracle Hyperion

Support Revolution provides personalised and scalable third-party support for Oracle Hyperion, addressing your unique challenges. We deliver rapid responses to P1 tickets within 10 minutes, with a commitment to resolving critical issues in 2 hours or less, establishing us as a leader in Hyperion independent support.

Clients are drawn to us for significant cost savings — reducing support expenses by up to 90% — and they stay for our tailored maintenance services, including security updates, support for integrations and customisations, and no forced upgrades. Now you can maintain your legacy Hyperion software without the pressure of vendor upgrades to maintain full support, allowing you to pursue your own roadmap and not Oracle's. Intensive Hyperion components create hardware challenges due to their CPU heavy nature, Support Revolution can help you with your hardware requirements to improve the performance of your Hyperion system. By partnering with Support Revolution, you gain access to expert assistance that minimises downtime and enhances Hyperion operational efficiency.

**We are so grateful to all of the team at Support Revolution for helping us lower our IT expenditure, and for doing it so quickly too. The savings we've made have been fantastic, and at a critical time when we really needed it.**
